Quanser Studios: How to Setup Fixed IP Addresses

What this document covers

How to set fixed IP addresses for Quanser devices such as QDrone 2, QCar 2, QBot Platform with the provided Netgear R7000 or TP-Link Archer AXE 95 routers

Setting Static IP Addresses with Netgear Router

The procedure below shows how to set fixed IP addresses of connected devices (e.g., QDrone 2, QCar 2) through a Netgear router.

1. Launch a web browser from a device that is connected to your router's network (for example, the ground station PC).
2. Enter the IP gateway in the address bar, for example "http://192.168.2.1", and log in. The IP gateway can be found by entering `ipconfig` command to Windows PowerShell. Router login credentials are as follows:

Username: admin

Password: Quanser_123

3. That opens the screen in Figure 1. Click on attached devices.

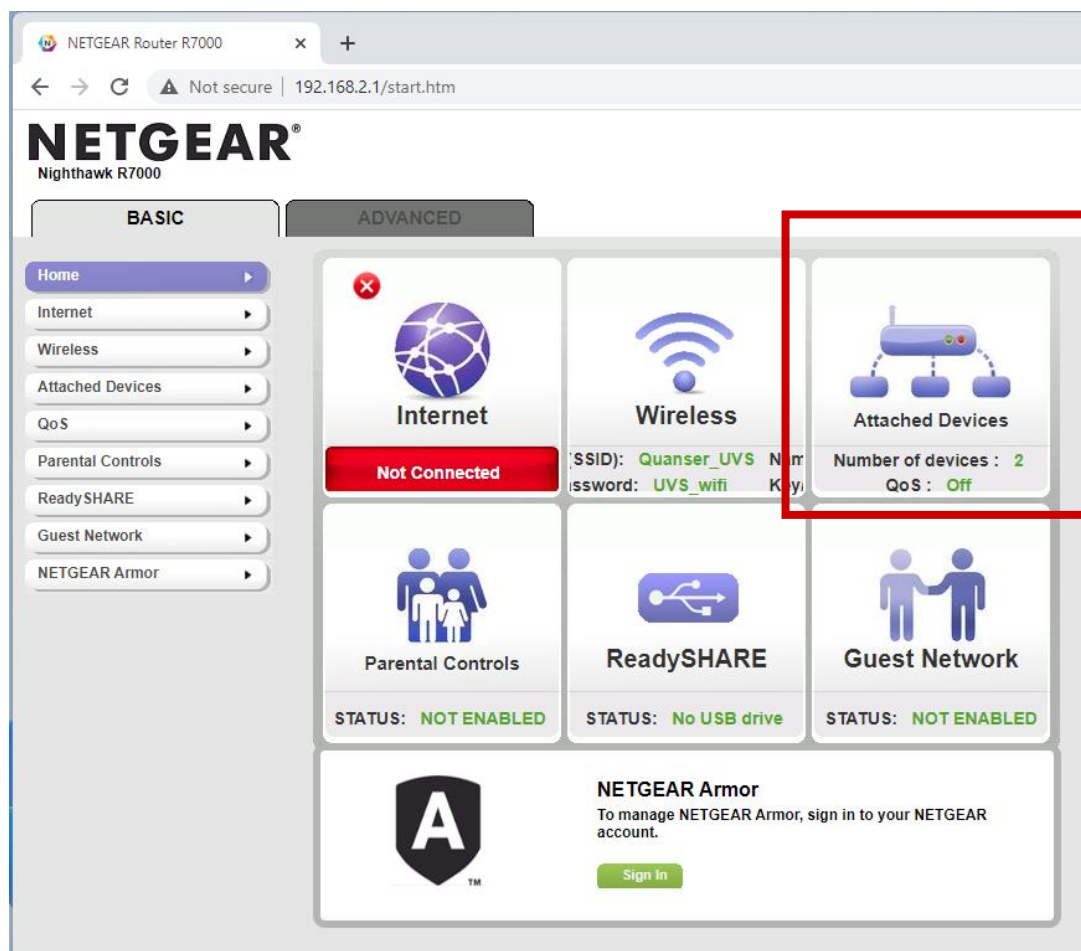

Figure 1. Main screen after router login.

4. You should see a list of devices connected to that network, as shown in figure 2. Verify that the connected devices have the correct IP addresses.

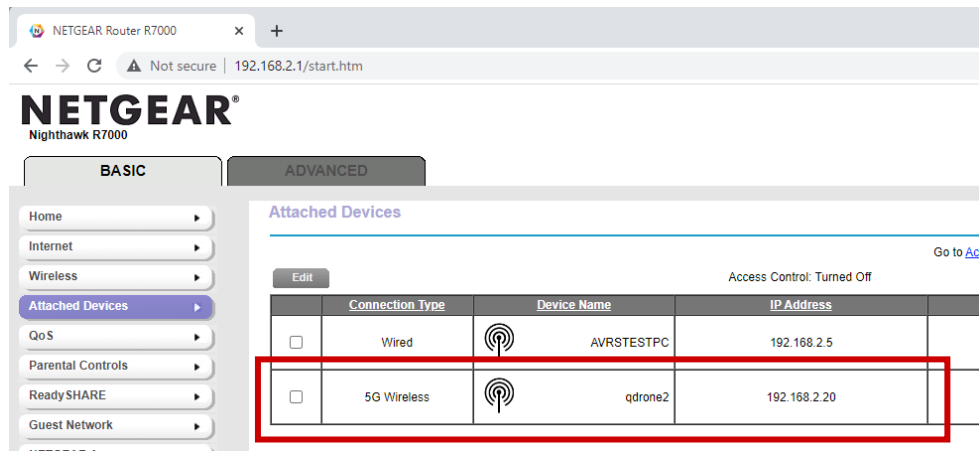

Figure 2. Finding the drone in the router's attached devices.

5. To change or set a fixed IP address, go to the *Advanced tab > Setup > LAN Setup* and click on the **Add** button at the bottom of the page, as shown in Figure 3.

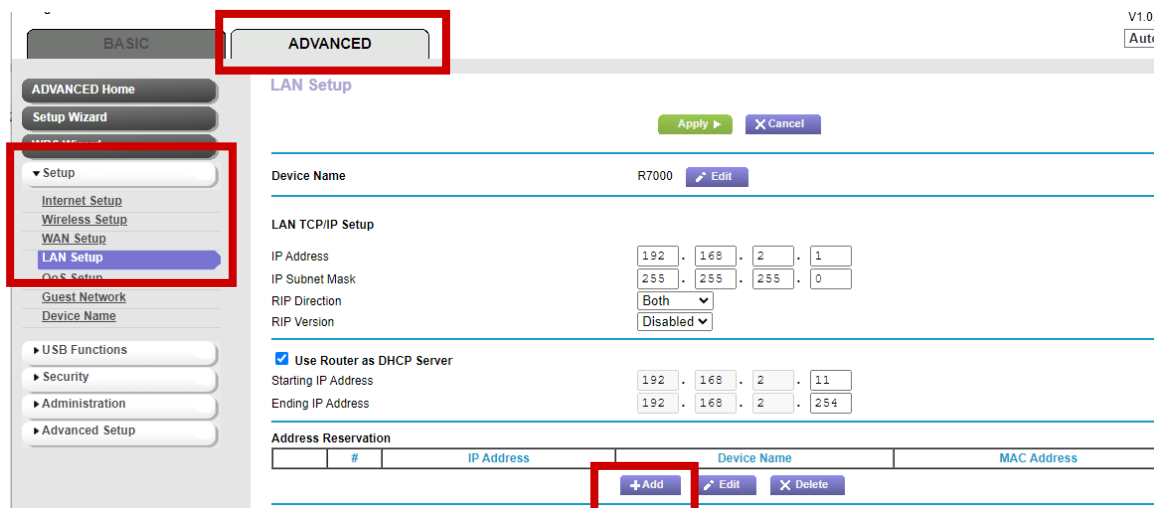

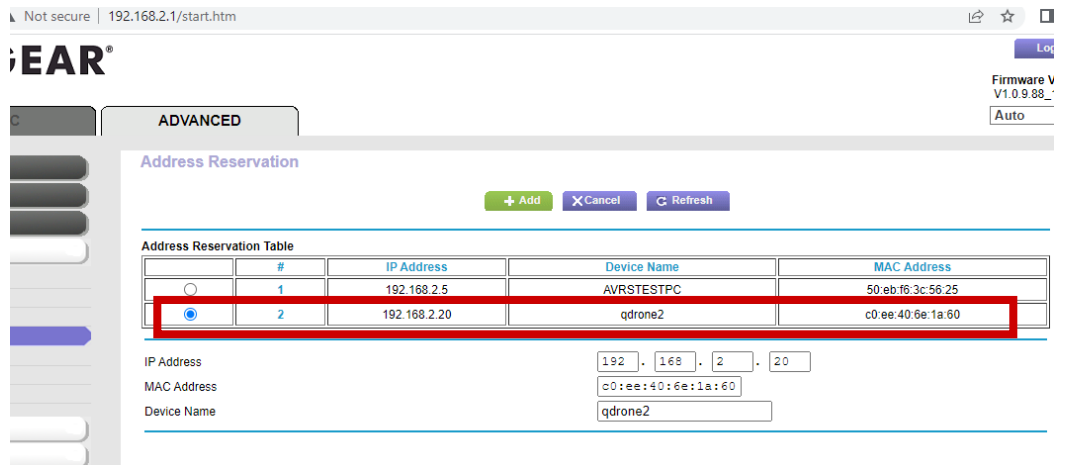

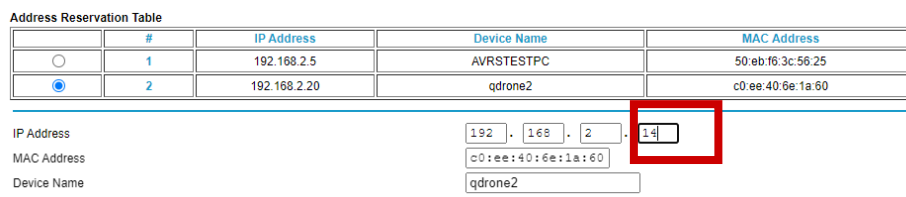

Figure 3. Finding the Address reservation table to set a fixed IP.

6. Select the device in the *Address Reservation* table, as shown in Figure 4a. To change the IP address, go to the *IP Address* box below and change the last digit to the IP address (keeping the 192.168.2 the same). For example, as shown in Figure 4b, instead of using **192.168.2.20**, you can choose another IP address between 192.168.2.11 and 192.168.2.254, for example **192.168.2.14**.
7. Click the green **Add** button above the *Address Reservation* table.

(a)

(b)

Figure 4. Finding the Address reservation table to set a fixed IP.

- The *Address Reservation* table should show the device (e.g., QDrone 2, QCar 2) with the new IP address, as illustrated in Figure 5.

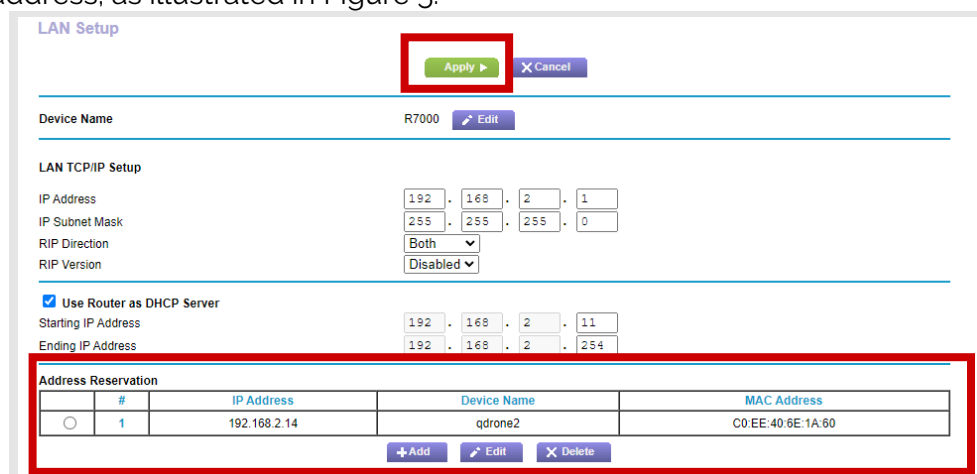

Figure 5. Setting a Fixed IP for the Drone.

- Click on the green **Apply** button to commit the changes.
- Once the settings are updated, the device will now have that fixed IP.

11. Turn the device on and off to make sure the settings are properly applied. It is recommended to label the device with the IP address, e.g., next to the hostname or on top of the frame.

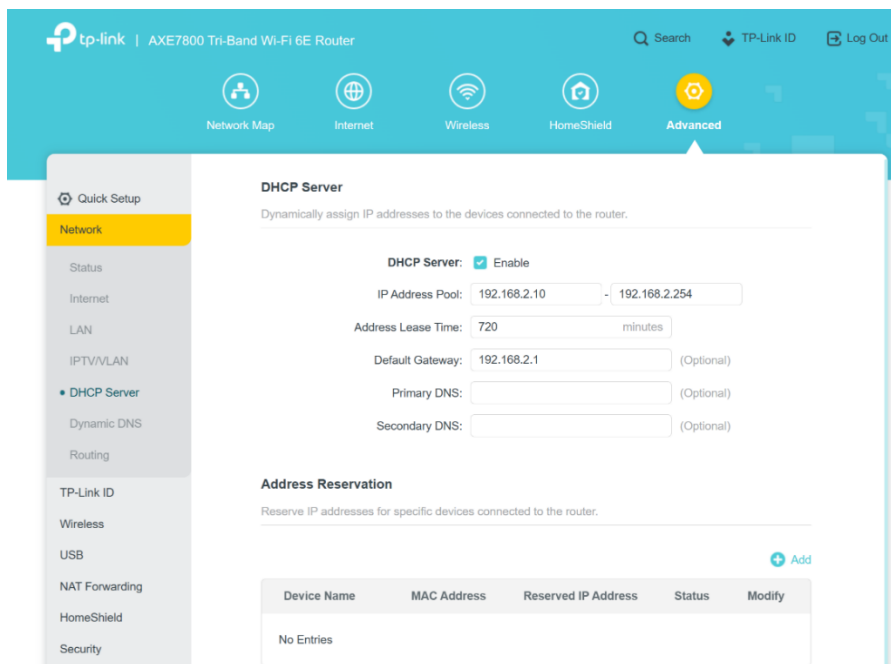

Setting Static IP Addresses with TP-Link Archer AXEg5 Router

1. Go to <http://tplinkwifi.net> and log in the router using the following credentials:

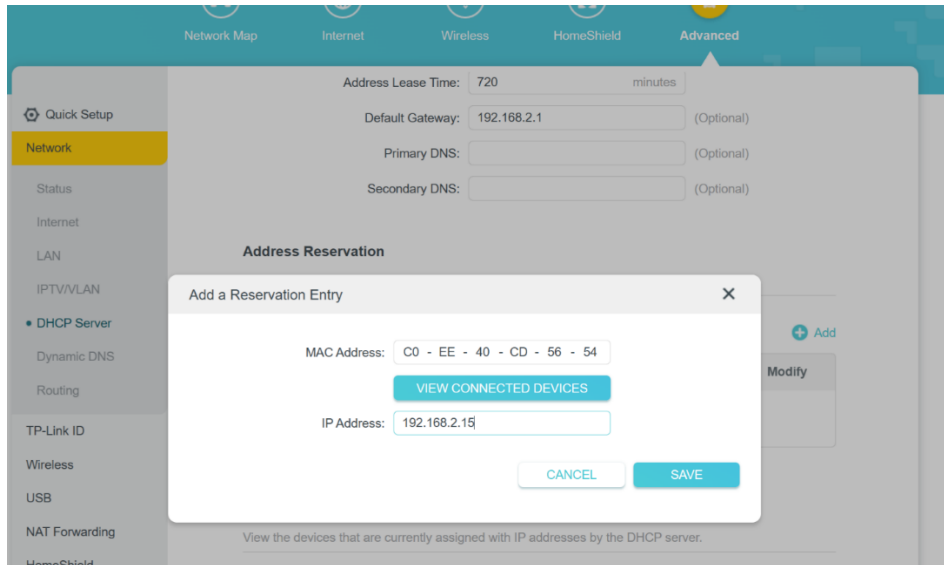

Username: admin

Password: Quanser_123

2. Go to: **Advanced** → **Network** → **DHCP Server**
3. Scroll to **Address Reservation**.
4. Click the **Add** button.

5. Enter the MAC and IP addresses in the fields of the Address Reservation dialog:
 1. **MAC Address:** XX:XX:XX:XX:01
 2. **Enter IP Address:** 192.168.x.20
 3. **Device Name** (optional): Traffic Light #1, #2 or Qcar2_1 to Qcar2_5
 4. **Status:** Enabled

6. Click on **Save**. The IP address should now be fixed for the device.

Address Reservation

Reserve IP addresses for specific devices connected to the router.

+ Add

Device Name	MAC Address	Reserved IP Address	Status	Modify
qcar-00000	C0-EE-40-CD-56-54	192.168.2.15	☒	

7. Reboot the router.
8. Verify that the devices that have the assigned IP addresses, e.g., through the TP-Link router software or a "ping" test.
